1. 选择和使用 ISO

1.1. 简介

Mageia is distributed via ISO images. This page will help you to choose which image best suits your needs.

There are three types of installation media:

- Classical installer: Booting with this media provides you with the maximum flexibility when choosing what to install, and for configuring your system. In particular, you have a choice of which Desktop environment to install.

- LIVE media: This option allows you to try out Mageia without having to actually install it, or make any changes to your computer. However, the Live media also includes an Installer, which can be started when booting the media, or after booting into the Live operating system itself.

The Live Installer is simpler compared to the Classical Installer - but you have fewer configuration options.

Live ISOs can only be used to create “clean” installations, they cannot be used to upgrade previously installed Mageia releases.

- Net Install: These are minimal ISO’s containing no more than that which is needed to start the DrakX installer and find DrakX-installer-stage2 and other packages that are needed to continue and complete the install. These packages may be on the PC hard disk, on a local drive, on a local network or on the Internet.

These media are very light (less than 100 MB) and are convenient if bandwidth is too low to download a full DVD, or if you have a PC without a DVD drive or is unable to boot from a USB stick.

More details are given in the next sections.

1.2. 介质

1.2.1. 定义

Here, a medium (plural: media) is an ISO image file that allows you to install and/or update Mageia and, by extension, any physical medium (DVD, USB stick, ...) the ISO file is copied to.

You can find Mageia ISO's here [http://www.mageia.org/en/downloads/].
1.2.2. 传统安装媒介

1.2.2.1. 通用特性
- These ISOs use the Classical installer called DrakX
- They are used for performing clean installs or to upgrade a previously installed version of Mageia
- Different media for 32 and 64-bit architectures
- Some tools are available in the Installer “Welcome” screen: Rescue System, Memory Test, and Hardware Detection Tool
- Each DVD contains many available desktop environments and languages
- You'll be given the choice during the installation to add non-free software

1.2.3. Live 媒介

1.2.3.1. 通用特性
- Can be used to preview the Mageia operating system without having to install it
- The Live media also includes an Installer.
- Each ISO contains only one desktop environment (Plasma, GNOME or Xfce)
- Different media for 32 and 64-bit architectures
- They contain non-free software

1.2.3.2. Live DVD KDE
- Plasma desktop environment only
- All available languages are present
- 64-bit architecture only

1.2.3.3. Live DVD GNOME
- GNOME desktop environment only
- All available languages are present
- 64-bit architecture only

1.2.3.4. Live DVD Xfce
- Xfce desktop environment only
- All available languages are present
- 32 or 64-bit architectures

1.2.4. Net install media

1.2.4.1. 通用特性
- Different media for 32 and 64-bit architectures
- First steps are English language only

1.2.4.2. netinstall.iso
- Contains only free software, for those who prefer to not use non-free software
从 LIVE 介质安装

1.2.4.3. netinstall-nonfree.iso

- Contains non-free software (mostly drivers, codecs...) for those who need it

1.3. 下载和检查媒介

1.3.1. 下载中

Once you have chosen your ISO file, you can download it using either http or BitTorrent. In both cases, you are provided with some information, such as the mirror in use and an option to switch to an alternative if the bandwidth is too low.

If http is chosen you will also see some information regarding checksums.

md5sum, sha1sum and sha512sum (the most secure) are tools to check the ISO integrity. Copy one of the checksums (string of alphanumeric characters) for use in the next section.

In the meantime, a window to download the actual ISO will open:

Click on Save File, then click OK.

1.3.2. 检查下载文件的完整性

The checksums referred to earlier, are digital fingerprints generated by an algorithm from the file to be downloaded. You may compare the checksum of your downloaded ISO against that of the original source ISO. If the checksums do not match, it means that the actual data on the ISO's do not match, and if that is the case, then you should retry the download or attempt a repair using BitTorrent.

To generate the checksum for your downloaded ISO, open a console, (no need to be root), and:

- To use the md5sum, type: md5sum path/to/the/image/file.iso
- To use the sha1sum, type: sha1sum path/to/the/image/file.iso
- To use the sha512sum, type: sha512sum path/to/the/image/file.iso

Example:

```
[sam5@localhost ~]$ md5sum /home/sam5/Downloads/Mageia-4-RC-x86_64-DVD.iso
ec1ce42c4b003b5e9be9a6911968195c8  /home/sam5/Downloads/Mageia-4-RC-x86_64-DVD.iso

[sam5@localhost ~]$ sha1sum path/to/the/image/file.iso
```

then compare the result (you may have to wait for a while) with the ISO checksum provided by Mageia.

1.4. 刻录或转储 ISO

The verified ISO can now be burned to a CD/DVD or “dumped” to a USB stick. This is not a standard copy operation, as a bootable medium will actually be created.
1.4.1. 将ISO文件刻录到CD或DVD

Whichever software you use, ensure that the option to burn an image is used. Burn data or files is NOT correct. See the [Mageia wiki](https://wiki.mageia.org/en/Writing_CD_and_DVD_images) for more information.

1.4.2. 写入ISO到U盘

All Mageia ISOs are hybrids, which means you can dump them to a USB stick and then use that to boot and install the system.

Dumping an image onto a flash device destroys any previous file-system on the device and all existing data will be lost.

Also, the only partition on the flash device will then just be the Mageia ISO partition. So, if an ISO of about 4GB is written to an 8GB USB stick, the stick will then only show up as 4GB. This is because the remaining 4GB is no longer formatted - hence not currently available for use. To recover the original capacity, you must reformat and repartition the USB stick.

1.4.2.1. 使用Mageia的图形化工具

您可以使用 [IsoDumper](https://wiki.mageia.org/en/IsoDumper_Writing_ISO_images_on_USB_sticks) 这样的图形化工具来操作。

1.4.2.2. 使用Windows下的图形化工具

您可以尝试：

- Rufus [http://rufus.akeo.ie/?locale=en_US] using the "ISO image" option
- Win32 Disk Imager [http://sourceforge.net/projects/win32diskimager]

1.4.2.3. Using the Command line within a GNU/Linux system

It is potentially *dangerous* to do this by hand. You risk overwriting potentially valuable existing data if you specify the wrong target device.

1. 打开一个终端
2. Become a root (Administrator) user with the command su - (don't forget the - )

```
[Sam5@localhost ~]$ su -
Password:
[root@localhost ~]#
[root@localhost ~]#
[root@localhost ~]#
```
3. Plug in your USB stick - but do not mount it (this also means do not open any application or file manager that could access or read it)

4. Enter the command fdisk -l

```
[root@localhost ~]# fdisk -l

Disk /dev/sda: 298.1 GiB, 320072933376 bytes, 6251424480 sectors
Units: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 4096 bytes
I/O size (minimum/optimal): 4096 bytes / 4096 bytes
Disklabel type: dos
Disk identifier: 0x0000cb4bf
Partition 3 does not start on physical sector boundary.

Device Boot Start   End   Blocks  Id  System
/dev/sda1  *  2048 21256191 10627872 83  Linux
/dev/sda2   21256192 63528959 21136384 83  Linux
/dev/sda3   63530064 625137344 2088893199+ 5  Extended
/dev/sda5   63531008 84873215 10671104 83  Linux
/dev/sda6   84875264 127816989 21070848 83  Linux
/dev/sda7  127019008 135985151 4483372 82  Linux swap / Solaris
/dev/sda8  135987208 198598655 31395728 83  Linux
/dev/sda9  198600704 471588863 136494080 83  Linux
/dev/sda10  471590912 496777984 12593541+ 83  Linux
/dev/sda11  496781312 504955079 4086884 82  Linux swap / Solaris
/dev/sda12  504958976 625137344 60089184+ 83  Linux
```

5. Find the device name for your USB stick (by its size), for example /dev/sdb in the screenshot above, is an 8GB USB stick.

Alternatively, you can find the device name with the command dmesg. Towards the end of the following example, you can see the device name starting with sd, and in this case, sdd is the actual device. You can also see that its size is 2GB:

```
[72594.604531] usb 1-1: new high-speed USB device number 27 using xhci_hcd
[72594.770528] usb 1-1: New USB device found, idVendor=8564, idProduct=1000
[72594.770533] usb 1-1: New USB device strings: Mfr=1, Product=2, SerialNumber=3
[72594.770536] usb 1-1: Product: Mass Storage Device
[72594.770537] usb 1-1: Manufacturer: JetFlash
[72594.770539] usb 1-1: SerialNumber: 18MJTWMPUC35SB
[72594.770713] usb 1-1: ep 0x81 - rounding interval to 128 microframes, ep desc says 255 microframes
```
2. 引导 Mageia Live 系统

2.1. 引导媒体

You can boot directly from a Live DVD or USB. Usually, you just need to plug the USB device in or place the DVD in the drive and restart the computer.

If the computer does not automatically boot from the USB or DVD you may need to reconfigure your BIOS Boot Disk priority. Alternatively, you might try accessing the boot device menu to select a device from which the computer will boot.

To access the BIOS or boot menu when the computer is starting, you can try pressing either F2, Del or Esc for the BIOS, or Esc, F8, F10 or F11 for the boot device menu. These (fairly common) keys are just a selection of possible options though.

The actual screen that you will first see when booting from the Live media will depend on whether your computer motherboard is of the Legacy (BIOS) or UEFI type.

6. Enter the command: `dd if=path/to/the/ISO/file of=/dev/sdX bs=1M`

Where X=your device name eg: /dev/sdd

Example: `dd if=/home/user/Downloads/Mageia-6-x86_64-DVD.iso of=/dev/sdd bs=1M`

It might be helpful to know that if stands for input file and of stands for output file.

7. Enter the command: `sync`

8. This is the end of the process, and you may now unplug your USB stick.
2.2. 在 BIOS/CSM/Legacy 模式下

![Mageia 7-beta1 Live Plasma (64-bit)](image)

**Menu**

- **Boot Mageia**
  
  This option will boot the Mageia Live system from the connected DVD/USB media (expect a very slow system compared to an installed OS).
  
  Once the boot is done, you can proceed to the installation.
  
  - + use non-free video drivers (slower to boot)
  
  Boot the Mageia Live system using non-free video drivers

- **Install Mageia**
  
  This option will install Mageia to a hard disk.
  
  - + use non-free video drivers (slower to boot)
  
  Install Mageia using non-free video drivers

- **Memory Test**
  
  Test the installed RAM by performing multiple read and write operations. Reboot to end the test.

- **F2 Language**
  
  Press F2 to have the installer use a specific language during the installation. Use the arrow keys to select the language then press Enter.
2.3. 在 UEFI 模式下

First screen while booting in UEFI mode

Menu

- Boot Mageia

  This option will boot the Mageia Live system from the connected DVD/USB media (expect a very slow system compared to an installed OS). Once the boot is done, you can proceed to the installation

- Install Mageia

  This option will install Mageia to a hard disk.

- F2 Language

  Press F2 to have the installer use a specific language during the installation. Use the arrow keys to select the language then press Enter.

If you booted from a USB stick, you will see the above menu options duplicated, and in this case, you should choose from the menu pair that will be suffixed with "USB".
3. 请选择要使用的语言

- Select your preferred language. Mageia will use this selection during the installation and for your installed system.

- Mageia uses UTF-8 (Unicode) support by default. This may be disabled in the Multiple languages screen if you know that it is inappropriate for your language. Disabling UTF-8 applies to all installed languages.

- You can change the language for your system post-installation in the Mageia Control Center → System → localization for your system.

4. 许可证和发行说明

4.1. 许可协议

- Before installing Mageia, please read the license terms and conditions carefully.

- These terms and conditions apply to the entire Mageia distribution and must be accepted before you can continue.

- To proceed, simply select Accept and then click on Next

If you decide not to accept these conditions, then we thank you for your interest in Mageia. Clicking Quit will reboot your computer.

4.2. 发行说明

Important information about this particular Mageia release can be viewed by clicking on the Release Notes button.

5. 配置时区

- Choose your timezone by choosing your country, or a city close to you in the same timezone.

In the next screen you can choose to set your hardware clock to local time or to GMT, also known as UTC.

若您安装了多个操作系统，请确保硬件时钟均被设为本地时间，或均为 UTC/GMT。

6. Clock Settings

Here, you can select whether your computer internal clock is set to local time or UTC time.

In the Advanced tab, you can enable automatic time synchronization and specify an NTP server.
从 LIVE 介质安装

7. Select Keyboard

Here you can set the keyboard layout you wish to use with Mageia.

A suggested keyboard layout (highlighted), has been chosen for you based upon your previously selected language and timezone choices.

8. 以 Live 模式运行 Mageia

8.1. Live 模式

This is the screen you will see if you selected the Boot Mageia option from the Live media menu.

8.1.1. 测试硬件

One of the aims of using the Live mode is to test that your hardware is correctly managed by Mageia. You can check if all devices have a driver in the Hardware section of the Mageia Control Center:

- 网络接口：使用 net_applet 进行配置
- graphics card: if you see the previous screen, it's already OK.
- 声音：刚才播放了“叮呤”声
- printer: configure your printer/s and print a test page
- 扫描器：扫描文档自 ...

If everything is satisfactory, you can proceed with the installation. If not, you can use the Quit button to exit.

The configuration settings you apply here are carried over if you decide to proceed with the installation.

8.1.2. 启动安装

To launch the installation of the Live DVD to a hard disk or SSD drive, simply click the Install on Hard Disk icon on the Live desktop. You will then see this screen, followed by the Partitioning step.

9. Partitioning

9.1. Suggested Partitioning

In this screen you can see the content of your hard drive(s) along with the DrakX partitioning proposals for where to install Mageia.

The actual options available from those shown below will vary according to the layout and content of your particular hard drive(s).
从 LIVE 介质安装

Main Options

• Use Existing Partitions

若此选项可用，表面安装程序找到了现存的 Linux 分区，并且可以将其用于 Mageia 的安装。

• Use Free Space

若硬盘上有未使用的区域，此选项将会把 Mageia 安装到该区域中。

• Use Free Space on a Windows Partition

If you have unused space on an existing Windows partition, the installer may offer to use it. This can be a useful way of making room for your new Mageia installation, but is a risky operation so you should make sure you have backed up all important files!

With this option, the installer displays the remaining Windows partition in light blue and the proposed Mageia partition in dark blue with their intended sizes just underneath. You have the option to modify these sizes by clicking and dragging the gap between both partitions. See the following screenshot:

• Erase and use Entire Disk

This option will allocate the entire drive for Mageia

![](warning-icon.png)

This will erase ALL data on the selected hard drive. Take care! If you intend to use part of the disk for something else, or you already have data on the drive that you are not prepared to lose, then do not use this option.

将会缩小 Windows 分区的大小。该分区必须为“clean”状态，即上一次使用 Windows 时必须正常地关机或重启。同时，该分区也应当进行碎片整理，即便不能将文件碎片完全移出待使用区域。我们推荐您对个人文件进行备份后再进行此操作。

• Custom Disk Partitioning

允许您完全控制系统在硬盘上的安装方式。

If you are not using the Custom disk partitioning option, then the installer will allocate the available space according to the following rules:

• If the total available space is less than 50 GB, then only one partition is created. This will be the / (root) partition.

• If the total available space is greater than 50 GB, then three partitions are created
  - 6/19 of the total available place is allocated to / with a maximum of 50 GB
  - 1/19 is allocated to swap with a maximum of 4 GB
  - the rest (at least 12/19) is allocated to /home

This means that from 160 GB or greater available space, the installer will create three partitions:

• 50 GB for /
• 4 GB for swap
• and the remainder for /home
If you are using a UEFI system, the ESP (EFI System Partition) will be automatically detected - or created if it does not exist yet - and mounted on /boot/EFI. The Custom disk partitioning option is the only one that allows to check it has been correctly done.

If you are using a Legacy (also known as BIOS) system with a GPT partitioned disk, you need to create a BIOS boot partition if it doesn't already exist. It should be about 1 MiB with no mount point. It can be created with the Installer, under Custom disk partitioning, like any other partition. Be sure to select “BIOS boot partition” for filesystem type.

See DiskDrake for information on how to proceed.

Some newer drives are now using 4096 byte logical sectors, instead of the previous standard of 512. Due to lack of available hardware, the partitioning tool used in the installer has not been tested with such a drive.

Some SSD devices now use an erase block size over 1 MB. If you have such a device we suggest that you partition the drive in advance, using an alternative partitioning tool like gparted, and to use the following settings:

- Align to = MiB
- Free space preceding (MiB) = 2

Also make sure all partitions are created using an even number of megabytes.

9.2. 选择挂载点

Here you see the Linux partitions that have been found on your computer. If you don't agree with the DrakX suggestions, you can change the mount points yourself.

- To the left of the drop-down menus is a list of available partitions. For example: sda is a hard drive - and 5 is a partition number, followed by the (capacity, mount point, filesystem type) of the partition.

- If you have several partitions, you can choose various different mount points from the drop down menu, such as /, /home and /var. You can even make your own mount points, for instance /video for a partition where you want to store your films, or perhaps /Data for all your data files.

- For any partitions that you don't need to make use of, you can leave the mount point field blank.

If you make any changes here, ensure you still have a / (root) partition.

If you are not sure what to choose, click Previous to go back and then tick Custom disk partitioning, where you can click on a partition to see its type and size.
If you are sure the mount points are correct, click on Next, and choose whether you only want to format the partition suggested by DrakX, or more.

9.3. 确定要格式化的硬盘

- Click on Previous if you are at all unsure about your choice.
- Click on Next to proceed if you are sure that it is OK to erase every partition, every operating system and all data that might be on that hard disk.

9.4. Custom Disk Partitioning with DiskDrake

- Modify the layout of your disk(s) here. You can remove or create partitions, change the filesystem or size of a partition and even view their details before you start.
- There is a tab at the top for every detected hard disk (or other storage device, like a USB key). In the screenshot above there are two available devices: sda and sdb.
- For all other actions: click on the desired partition first. Then view it, or choose a filesystem and a mount point, resize it or wipe it. Expert mode provides more options such as to label (name) a partition, or to choose a partition type.
- Continue until you have adjusted everything to your satisfaction, then click Done when you're ready.

1. Take care with the Clear all option, use it only if you are sure you want to wipe all partitions on the selected storage device.
2. If you wish to use encryption on your / partition you must ensure that you have a separate /boot partition. The encryption option for the /boot partition must NOT be set, otherwise your system will be unbootable.

- If you are installing Mageia on a UEFI system, check that an ESP (EFI System Partition) is present and correctly mounted on /boot/EFI. See Figure 1 below.
- If you are installing Mageia on a Legacy/GPT system, check that a BIOS boot partition is present and of the correct type. See Figure 2 below.

图 1. EFI System Partition

图 2. BIOS boot partition

9.5. 格式化

Here you can choose which partition(s) you wish to format. Any data on partitions not marked for formatting will be preserved.

Usually, at least the partitions that DrakX selected need to be formatted.

Click on Advanced to choose the partitions you want to check for so-called bad blocks
从 LIVE 介质安装

If you’re not sure you have made the right choice, you can click on Previous, again on Previous and then on Custom to get back to the main screen, where you can choose to view details of your partitions.

When you are confident about the selections, click on Next to continue.

10. 保留或删除未使用的软件

In this step, the installer looks for unused locales packages and unused hardware packages and you are then given an opportunity to delete them.

If you do not foresee a case where your installation may need to run on different hardware, or that you might need additional localization files then you might wish to accept this proposal.

Clicking Advanced will list the unused hardware and localization files that will be removed if you proceed.

The next step is the copying of files to hard disk. This process should just take a little while to complete. When it is finishing you will briefly get a blank screen - this is normal.

11. Bootloader

11.1. Grub2

Grub2 on Legacy MBR/GPT systems

- GRUB2 (with or without graphical menu) will be used exclusively as the bootloader for a Legacy/MBR or Legacy/GPT system.
• By default, a new bootloader will be written into either the MBR (Master Boot Record) of your first hard drive or in the BIOS boot partition.

Grub2-efi on UEFI systems

• GRUB2-efi will be used exclusively as the bootloader for a UEFI system.
• By default, a new bootloader (Grub2-efi) will be written into the ESP (EFI System Partition).

If there are already UEFI-based operating systems installed on your computer (Windows 8 for example), the Mageia installer will detect the existing ESP created by Windows and add grub2-efi to it. If no ESP exists, then one will be created. Although it is possible to have several ESPs, only one is required, whatever the number of operating systems you have.

11.2. Bootloader Setup

11.2.1. 引导程序的主要选项

• Bootloader to use
  This feature is only available to Legacy MBR/BIOS systems. Users of UEFI systems will not see this option here.

• Boot device
  Don't change this unless you really know what you are doing

• Delay before booting the default image
  This text box lets you set a delay, in seconds, before the default operating system is started up.

• Security
  This allows you to set a password for the bootloader. This means a username and password will be required when booting in order to select a booting entry or change settings. This is optional, and most people are not likely to have a need for it. The username is root and the password is the one chosen hereafter.

• Password
  Choose a password for the bootloader (optional)

• Password (again)
  Retype the password and DrakX will check that it matches with the one set above

Advanced

• Enable ACPI
  ACPI (Advanced Configuration and Power Interface) is a standard for power management. It can save energy by stopping unused devices. Deselecting it could be useful if, for example, your computer does not support ACPI or if you think the ACPI implementation might cause some problems (for instance random reboots or system lockups).

• Enable SMP
  This option enables/disables symmetric multiprocessing for multi-core processors

• Enable APIC
Enabling this gives the operating system access to the Advanced Programmable Interrupt Controller. APIC devices permit more complex priority models, and Advanced IRQ (Interrupt Request) management.

- Enable Local APIC

Here you can set Local APIC, which manages all external interrupts for a specific processor in an SMP system

11.2.2. Bootloader Configuration

- Default

The operating system to be started up by default.

- Append

This option lets you pass information to the kernel or tell the kernel to give you more information as it boots.

- Probe foreign OS

If you already have other operating systems installed, Mageia attempts to add them to your new Mageia boot menu. If you don't want this behaviour, then untick the Probe Foreign OS option.

Advanced

- Video mode

This sets the screen size and colour depth to be used by the boot menu. If you click the down-triangle you will be offered other size and colour depth options.

- Do not touch ESP or MBR

Select this option if you don't want a bootable Mageia, but would rather chain-load it from another OS. You will get a warning that the bootloader is missing. Click Ok if you are sure you understand the implications, and wish to proceed.

11.3. Other Options

11.3.1. 使用现存的引导器

The exact procedure for adding Mageia to an existing bootloader is beyond the scope of this documentation. However in most cases it will involve running the relevant bootloader installation program, which should detect Mageia and automatically add an entry for it in the bootloader menu. See the documentation for the relevant operating system.

11.3.2. Installing Without a Bootloader

While you can opt to install Mageia without a bootloader (see section 2.1 Advanced), this is not recommended unless you absolutely know what you are doing, as without some form of bootloader your operating system will be unable to start.
11.3.3. 添加或修改引导菜单项

To do this you need to manually edit /boot/grub2/custom.cfg or use the software grub-customizer tool instead (available in the Mageia repositories).

For more information, see: https://wiki.mageia.org/en/Grub2-efi_and_Mageia

12. 重新启动

Once the bootloader has been installed, you will be prompted to halt your computer, remove the live DVD/USB stick and restart the computer.

Ensure that you follow these shut-down and restart instruction steps in the same order.

When you are ready, press Finish.

When you restart, you will see a succession of download progress bars. These indicate that the software media lists are being downloaded (see Software Management).

13. User Management

13.1. 设置管理员（root 账户）密码：

It is advisable for all Mageia installations to set a superuser (Administrator) password, usually called the root password in Linux. As you type a password into the top box a shield will change from red-to-yellow-to-green depending on the strength of the password. A green shield shows you are using a strong password. You need to repeat the same password in the box underneath, to check that the first entry was not mistyped.

All passwords are case-sensitive. It is best to use a mixture of letters (upper and lower case), numbers and other characters in a password.

13.2. 输入用户名

Add a User here. A regular user has fewer privileges than the superuser (root), but enough to use the Internet, office applications or play games and anything else the average user might use a computer for.

• Icon

Click on this button if you want to change the user's icon
14. Login Screen

Finally, you will come to the desktop login screen.

Enter your user name and user password, and in a few seconds you will find yourself with a loaded KDE Plasma or GNOME desktop, depending on which live medium you used. You can now start using and enjoying your Mageia installation.

You can find further documentation in the Mageia wiki [../../installer/].

15. 卸载Mageia

If Mageia didn't convince you or you can't install it correctly - in short you want get rid of it - that is your right and Mageia also gives you the possibility to uninstall. This is not true for every operating system.

After backing up your data, reboot your Mageia installation DVD and select Rescue system, then Restore Windows boot loader. At the next boot, you will only have Windows, with no option to choose your Mageia operating system.

In Windows, to recover the space used by Mageia partitions: click on Start → Control Panel → Administrative Tools → Computer Management → Storage → Disk Management. You will recognise a Mageia partition because they are labeled Unknown, and also by their size and place on the disk. Right-click on each of these partitions and select Delete to free up the space.

If you are using Windows XP, you can create a new partition and format it (FAT32 or NTFS). It will then get a partition letter.

If you have Vista or 7, you have one more possibility, you can extend the existing partition that is at the left of the freed space. There are other partitioning tools that can be used, such as gparted.
available for both Windows and Linux. As always, when changing partitions, be very careful to back up anything important to you.
